PROFILE

Recent Master of Information Technology graduate with practical experience across full-stack web development, CMS integration, cloud deployment, DevOps and application security. Built responsive React and TypeScript interfaces, REST API integrations, Contentful-managed content and Dockerised applications, and deployed cloud workloads through Azure and Kubernetes in academic projects. Cybersecurity training adds a secure-by-design mindset, including OWASP principles, authentication, vulnerability analysis and Linux-based investigation. Business and marketing experience supports clear requirements translation, stakeholder communication and user-focused delivery.

TECHNICAL SKILLS

- **Web Development:** React, TypeScript, JavaScript, Node.js, HTML5, CSS3, responsive design, REST API integration
- **CMS & Delivery:** Contentful CMS, JSON, content workflows
- **Cloud & DevOps:** Microsoft Azure, Azure Kubernetes Service, OpenTofu/IaC, Docker, Jenkins, CI/CD, Git/GitHub
- **Data & Systems:** PostgreSQL, SQL, Linux, Python, C#/.NET fundamentals, microservices fundamentals
- **Security & Quality:** OWASP principles, authentication and authorisation concepts, vulnerability assessment, cross-browser testing
- **Delivery & Design:** Figma, accessibility-aware UI design, Agile/Scrum, technical documentation, requirements analysis, Cursor, Codex

SELECTED PROJECTS

Gather - Interactive Digital Invitation Platform

2026 (In progress)

React, TypeScript, HTML/CSS, REST APIs, JSON, GitHub, Vercel, Figma

- Designed and developed responsive user flows for authentication, invitation management, and the interactive editor.
- Integrated Unsplash image search into the editor, allowing users to browse and add stock photography directly to invitation designs.
- Built reusable components for invitation templates, editable cards, dashboard views, and preview interactions, with ongoing deployment through GitHub and Vercel.

Alive - Sleep Health Tracking Application

2025

Figma, Contentful, HTML/CSS, Python, SQL, REST APIs, Docker

- Worked in an Agile team across multiple sprints, leading the initial UI design in Figma and refining the main site and personalised dashboard to match approved prototypes.
- Developed the Insights page and integrated Contentful CMS to fetch and present dynamic article content within the app.
- Built AI insights generation features for sleep trend analysis and recommendations, and handled cache data where required to support responsive user interactions.
- Implemented CRUD-based notification behaviour.
- Containerised the full-stack application with REST APIs and database integration.

Azure DevOps and AKS Deployment Projects

2025

Microsoft Azure, AKS, ACR, OpenTofu, Docker, Jenkins, Git, Python, PostgreSQL

- Provisioned Azure resource groups, container registry, Kubernetes, and storage infrastructure using OpenTofu, then deployed containerised frontend and backend services to AKS.
- Built CI/CD workflows covering checkout, dependency installation, testing, image builds, security scanning and deployment.
- Worked through service networking, configuration and dependency issues across microservices, strengthening troubleshooting and release-management skills.

Secure Application and Memory Forensics Investigation

2026

Python, Linux, LiME, Docker, Wireshark, iptables, OWASP

- Simulated and investigated a fileless credential theft scenario in an Ubuntu environment, capturing volatile memory and building Python-based evidence extraction.
- Applied Linux firewall controls to contain the attack and verified isolation, linking secure development concepts with practical incident investigation and vulnerability remediation.

PROFESSIONAL EXPERIENCE

TGM Research

May 2023 - May 2024

Marketing Assistant

- Managed website and content updates across APAC, MENA, LATAM, Europe, North America, and Africa using Joomla CMS, supporting consistent digital communication across multiple regional markets.
- Analysed research findings and translated complex information into clear content and reports for diverse technical and non-technical stakeholders.

VNG Corporation

Jun 2022 - Feb 2023

Associate Marketing Executive

- Conducted market and user research to improve engagement for the UpRace application.
- Worked across business and digital functions to deliver user-facing content for a mobile app environment, strengthening experience in requirement interpretation and cross-team collaboration.

EDUCATION

Deakin University

2026

Master of Information Technology

- **WAM:** 84.31/100, Cybersecurity specialisation, recipient of the Deakin STEM Scholarship
- **Relevant study:** Applied Software Engineering, Software Deployment and Operations, Database Fundamentals, Web Technologies, Ethical Hacking, Computer Networks and Security, Computer Forensics and Investigations

UEH - ISB

2023

Bachelor of Business Administration (Honours)

- **GPA:** 3.18/4
- **Final thesis defence:** 9.75/10
