

---

## TECHNICAL SKILLS AND TOOLS

- **Programming:** Foundational skills in Python, SQL, HTML, and C# for scripting and development tasks.
  - **Cybersecurity Tools & Traffic Analysis:** Experience with Wireshark, Nmap, Metasploit, pfSense, and Firewall for traffic analysis, packet capture, botnet communication patterns, vulnerability scanning, and firewall evaluation.
  - **Virtualisation & Systems:** Proficient in VMware, VirtualBox, and managing Linux (Kali, Ubuntu) environments.
  - **Machine Learning:** Exposure to model training and evaluation using classification algorithms for intrusion detection and threat analysis.
- 

## PROFESSIONAL EXPERIENCE

### TGM RESEARCH

*Vietnam, May 2023 - May 2024*

#### Marketing Assistant

- Managed social and website content across diverse areas across APAC, MENA, LATAM, EU, NA, and Africa.
- Handled essential company and employee updates and prepared periodical reports.
- Designed assets (infographics, videos, banners) for campaigns and company events.
- Led TGMstories (employer branding project), Mother's Day 2024 campaign, and Global Ramadan Insights 2024.

### VNG CORPORATION

*Vietnam, Jun 2022 - Feb 2023*

#### Associate Marketing Executive - UpRace Team

- Supported Marketing activities for a sports activity tracker application.
- Planned and updated website content, wrote video scripts, translated documents, and designed assets.

#### Marketing Fresher - NFT Team

- Joined the VNG Level Up Fresher Program 2022, under the Marketing track.
  - Researched on Blockchain and NFT trends, and initiated a Marketing plan for the NFT Platform.
- 

## EDUCATION

### DEAKIN UNIVERSITY *(Australia, 2026)*

#### Master of Information Technology

##### Specialisation: Cybersecurity

**Project HD+ under the 'Computer Networks and Security' Unit:** *Analysed IoT Cyberattacks Using Network Traffic Data* ([View Project](#))

- Analysed Mirai-infected IoT network traffic using Wireshark and the IoT-23 dataset.
- Identified and classified multiple cyberattacks, including TCP SYN floods, UDP flooding, spoofed DNS packets, and IRC-based Command and Control (C2) communications.
- Analysed botnet command activity through real-time inspection of destination ports, source IP spoofing, and IRC C2 message structures and extracted insights into traffic anomalies linked to botnet behaviours.

**Project HD under the 'Applied Software Engineering' Unit:** *Developed Sleep Health Tracking Application - Alive* ([View](#))

- Sprint 1: Led the Figma design of the web application by releasing the first version of the low-fidelity prototype and finalising the completed version of the mid-fidelity prototype.
  - Sprint 2: (1) Refined the Main Site and Personalised Dashboard UI aligned with the prototype. (2) Developed the 'Insights' page and managed Contentful CMS to fetch articles. (3) Developed AI insights generation for sleep trend analysis and recommendations, and handled cache data where necessary. (4) Added the delete options for the messages in the Announcement History and handled the logic of auto-switching between the person icon and the bell icon when there are new messages detected (CRUD).
- 

## LEADERSHIP AND EXTRA-CURRICULAR ACTIVITIES

- Completed the ISB Leadership Program and the Critical Thinking Skill Course of Thinking School.
- Achieved the 'Top 6 best-performed team' award in Marketing Competition 2021 - Colorful Minds.
- Became an Ambassador of iVolunteer Vietnam 2021.
