SUMMARY

Business and IT student with experience across software development, cybersecurity, and DevOps through academic projects. I have worked on translating user and project requirements into practical technical solutions in both individual and group settings. My technical exposure includes basic full-stack development, containerisation with Docker, and network security fundamentals.

CORE COMPETENCIES

- **Cybersecurity & Networking:** Wireshark analysis, vulnerability assessment, memory forensics, incident investigation
- **Systems & Infrastructure:** Linux (Ubuntu and Kali), Docker, VirtualBox, VMware, containerisation
- **Software Development:** Python, JavaScript (Node.js), SQL, REST APIs, Git/GitHub, HTML/CSS
- **Data & Problem Solving:** SQL fundamentals, database design basics, data analysis, research, documentation

EDUCATION

Deakin University 2026

Master of Information Technology, GPA: GPA: 84.31/100

- A crew member at InnoFes 2025 with the Deakin SIT Innovation team, supporting event operations and project showcases

UEH - ISB 2023

Bachelor of Business Administration (Honours), GPA: 3.18/4

- Achieved 9.75/10 in the final thesis defence, presenting a user engagement strategy for a sports activity tracker app

EMPLOYMENT HISTORY

TGM Research May 2023 - May 2024

Marketing Assistant

- Managed website and content updates across APAC, MENA, LATAM, Europe, North America, and Africa, supporting consistent digital communication across multiple regional markets.
- Prepared periodic company and employee update reports to improve communications for stakeholders.

VNG Corporation June 2022 - February 2023

Associate Marketing Executive

- Conducted market and user research to improve engagement for the UpRace application.
- Worked across business and digital functions to deliver user-facing content for a mobile app environment, strengthening experience in requirement interpretation and cross-team collaboration.

FEATURED PROJECTS

Alive - Sleep Health Tracking Application September - December 2025

Figma, Contentful, HTML, Python, SQL

- Led Sprint 1 UI design work by producing the first low-fidelity prototype and finalising the mid-fidelity prototype in Figma to establish the application's user flow and interface direction.
- Refined the Main Site and Personalised Dashboard in Sprint 2 to align implementation with approved design prototypes and improve usability.
- Developed the Insights page and managed Contentful CMS integration to fetch and present article content within the app.
- Built AI insights generation features for sleep trend analysis and recommendations, and handled cache data where required to support responsive user interactions.
- Implemented message deletion functionality and logic to auto-switch on-off bell icons when new messages were detected, delivering CRUD-based notification behaviour.
- Dockerised the full-stack application with REST APIs and database integration.

Volatile Memory Forensics Investigation of a Simulated Fileless Credential Theft Attack March - June 2026

Python, LiME, Linux, Memory Forensics

- Simulated a fileless malware attack targeting healthcare credentials within an Ubuntu virtual environment and investigated the attack using volatile memory forensics.
- Recovered compromised credentials from a live memory dump using LiME, Linux forensic utilities, and custom Python scripts for automated evidence extraction.
- Applied Python-based threat mitigation and iptables firewall rules to contain the simulated attack and verify successful network isolation.
